

Investment Philosophy

The portfolio seeks to invest in high quality businesses yielding above market average, demonstrating consistent dividend growth and persistent earnings and free cash flow growth that trade at a discount to their intrinsic value. Dividend yield and growth of future dividends is a key component of returns. Alta's dividend investment philosophy is rooted in three fundamental principles:

- Companies with leading profitability, financial flexibility and sustainable economic moat can deliver above market returns for long periods of time
- Growth of earnings and free cash flow allow for sustainable dividend growth over time
- A company's intrinsic value is not consistently recognized by markets

Key Characteristics

- Significant free cash flow generation
- Earnings and dividend growth with lower earnings per share variability
- Sustainable economic moat
- Profitability throughout the economic cycle
- Financial flexibility
- Valuation consciousness

Investment Process

Companies are identified through a fundamental, bottom-up investment process, beginning with a universe screen that seeks to identify companies that demonstrate financial strength, strong profitability, and a favorable track record.

Further analysis of these firms using Alta's proprietary free cash flow model, helps define the present value of the company. Fundamental analysis validates the strength of the company's management, business, and future performance expectations.

Favorable culmination of this process is the recognition of a security whose current trading value is significantly less than its intrinsic value.
