Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Beginning July 1, 2006, composite policy requires the temporary removal of any portfolio incurring a client initiated significant cash inflow or outflow of at least 20% of portfolio assets. The temporary removal of such an account occurs at the beginning of the month in which the significant cash flow occurs and the account re-enters the composite the next month after the cash flow. Prior to June 30, 2006, accounts were removed for cash flows of 10% or larger, and between July 1, 2002 and September 30, 2003, they were removed for flows of 5% or larger. Additional information regarding the treatment of significant cash flows is available upon request. Past performance is not indicative of future results. Gross of fees returns are used to calculate the internal dispersion as well as the composite and benchmark 3-year standard deviation.

The U.S. Dollar is the currency used to express performance. Returns are presented gross and net of model management fees and include the reinvestment of all income. Net of fee performance was calculated on an applied model fee basis of 1.0% annual, applied monthly. The annual composite dispersion is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Fee schedule is as follows: 1st \$1 mm @ 1.00%, next \$4 mm @ 0.90%, next \$5 mm @ 0.80%, next \$15 mm @ 0.70%, next \$25 mm @ 0.60% and negotiable thereafter. Quarterly minimum fee \$625. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Composite policy requires the temporary removal of any portfolio incurring a client initiated significant cash inflow or outflow of at least 20% of portfolio assets. The temporary removal of such an account occurs at the beginning of the month in which the significant cash flow occurs and the account re-enters the composite the next month after the cash flow.
